Blue Morning Glory

The purple tubular flowers of this tall-growing creeper may look pretty when in bloom, but it's extremely fast growing and can smother native vegetation as ground cover, as well as climbing up native trees.

If you notice blue morning glory on your property or in your nearby parks, please follow these guidelines.

Email info@restorehb.org.nz with any questions.

Recognise

Blue morning glory has uniquely shaped leaves which makes it easy to recognise.

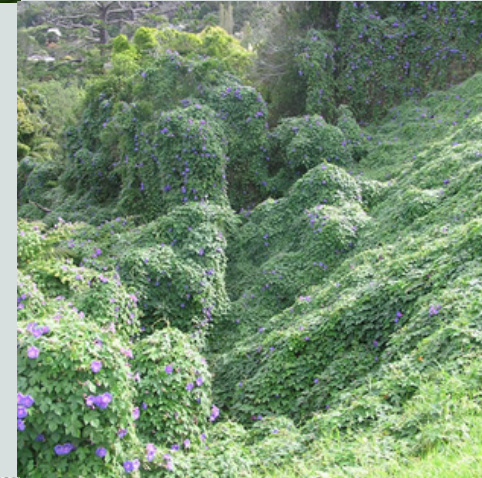

Spread the Word

Talk to your neighbours and encourage them to take action too!

Remove

Hand pull small infestations. For larger stems, cut near to the ground and immediately paste a thin smear of Bamboo Buster on the cut stem (can be purchased at most garden centres or hardware stores).

Dispose

As the weed spreads from stem fragments, hang up cut vine well off the ground and leave up high to dry out. Put all other cut waste inside a securely tied plastic bag and dispose in the rubbish bin to go to landfill. Alternatively, it can be put inside a composting weed bag.
